ABOUT ME

Motivated **BSc Computer Games Development** student at the **University of Westminster** with expertise in **C++**, **Unreal Engine 5**, and **gameplay programming**. Proven leader in high-pressure environments as a **Professional Esports Athlete**, combining **strategic decision-making**, **team collaboration**, and **technical problem-solving**. Passionate about game engine architecture, immersive design, and competitive innovation.

WORK EXPERIENCE

British Heart Foundation

Sep 2018 — Oct 2018

At the British Heart Foundation, I supported the daily operations of a charity retail store, prioritizing donor and customer engagement while managing inventory and sales processes. My responsibilities included processing donations, organizing stock, and creating visually appealing displays to maximize foot traffic and revenue for cardiovascular research. I worked alongside a diverse team of volunteers to meet weekly sales targets, often contributing ideas to streamline workflows and improve store efficiency.

Professional Esports Athlete (Dota 2)

Jan 2019 – Oct 2023

Competed internationally in high-pressure tournaments, honing expertise in **team leadership**, **strategic decision-making**, and **adaptability**. Led in-game tactical calls and strategy discussions, coordinating 5-player teamwork to counter evolving metas and opponents. Drove performance improvements by rigorously analyzing personal/team replays to identify and correct mechanical errors, communication gaps, and strategic blind spots. Maintained a disciplined 30+ hour weekly training schedule to refine individual execution while fostering collaborative growth, mentoring teammates and integrating feedback to elevate collective skill. Represented sponsors through livestreams and community engagement, blending technical insight with audience rapport to amplify brand reach.

ACHIEVEMENTS

- ✓ 2nd place in the Commonwealth games representing the UK for the Dota 2 section
- ✓ Competed in professional DotA with Team Alliance, ITB, IG.X
- ✓ Competed in the first division of DPC and came 4th at the TI qualifiers
- ✓ Played in several LAN tournaments around the world

BSc Computer Games Development

Sep 2017 – Aug 2021

University of Westminster

BSc Computer Games Development with a focus on game engines and heavy programming influence. The course contains games group projects, as well as independent work, creation of game assets and components using different modelling software, such as Maya and Photoshop. In addition, it contains strong mathematical and algorithms modules as well as object-oriented programming as well as using Game engines like Unity and Unreal Engine.

Core Modules

Year 1

- Applied Mathematics
- Game Enterprise
- Game Design and Asset Creation
- Games Development Group Project (Photoshop, Maya, Unreal Engine)
- Games Design & Asset Creation (Photoshop, Maya)

Year 2

- Game Programming Patterns (OOP - C++)
- Applied Maths & Physics for Games (Unity3D & OpenGL)
- Game Engine Architecture (UE5)
- Games Studio (Unreal Engine 5- C++ and Blueprints, Work-Based Learning, VR)
- Machine Learning and Data mining (Python, Google Colab)
- Mandarin

Year 3

- Computer Graphics Programming
- Computer Games Development Final Project
- Game AI
- Games Networking and Security

Expected degree: BSc (Hons) – Prediction 1st

TECHNICAL SKILLS

- Programming: C++, C#, Python
- Game Engines: Unreal Engine 5, Unity, Blueprint
- Tools: GitHub, Maya, Photoshop, Blender 3D
- Decisiveness | Confidence | Dedication | Creativity | Critical thinking | Open mindedness | Empathy | Time management | Communication | Adaptability

INTERESTS

- Creating and playing video games
- Read up and learn about random things
- **Competitive drive:** Continuously improving skills in gaming and development, thriving on challenges and strategic growth.
- **Passion for gaming:** Crafting and analyzing video games, merging player mastery with developer creativity.
-
